

Smart Facts

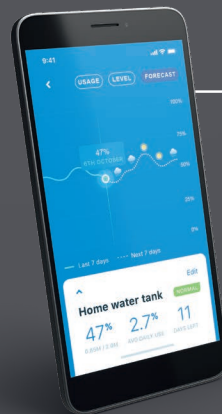

Pump Controller

The Smart Water Pump Controller is an essential piece of equipment for full management of the pumps in your water system. Offering complete "Set and Forget" functionality with a complete range of automatic and manual options. Fully programmable and controlled directly at the pump, via the WiFi LCD Keypad or through the mobile App. Up to twelve pump controllers can be added to the system to allow for even the most complex of installations.

Features

- 230VAC, 12VDC and Change-Over (C/O) versions available
- Convenient wall mounting enclosure
- Long range wireless performance, tested up to 10km
- Up to 12 pump controllers can be added to a single system
- Name your pump controllers for ease of identification
- Fully programmable automatic pump operation
- Pump from tank to tank, or from an infinite source such as a bore
- Real-time clock functionality
- Range can be extended using the Active Repeater
- Controllable with the free App available on iOS and Android devices
- Simple DIY installation and operation

Mobile App available: Mobile App including advanced features such as graphing and weather forecasting. The ultimate water management tool in the palm of your hand.

- A** Tank Transmitter
